

Making AI Work for Government Agencies

Phacil and Veritone have come together to make Artificial Intelligence (AI) work for you. Unlock the power of cognitive computing with the world's first operating system for AI, transforming and analyzing audio, video and other data sources in an automated manner to generate actionable insights.

Process and extract crucial information

Analyze content using a broad range of cognitive capabilities and applications, acting in concert on one platform.

Search petabytes of media in real-time

Utilize programmatic or ad-hoc search capabilities to identify spoken words, faces, objects, locations, logos and more, within content.

Automate indexing of historical and current content

Leverage time-based indexing by cognitive output, file, user-associated metadata, and structured datasets.

Collaborate with private and shared libraries

Employ new and archived content to build custom libraries that are shareable within and outside your organization.

Deploy a flexible solution

Integrate content from nearly any device or system with Veritone's open APIs.

Our core AI tenets include provenance of the data, the context in its use, and integrity of systems and data security. Veritone delivers an extensible platform for organizations to solve real-world challenges and discover insights with ease, speed and accuracy.

PHACIL CORE COMPETENCIES

- Software Services
- Systems Engineering, Integration, & Operations (SEI&O)
- Cyber Security
- Managed Services

CERTIFICATIONS

Capability Maturity Model Integration (CMMI)

- Level 3 for Services plus Service System Development (SVC+SSD)
- Level 3 for Development

International Organization for Standardization (ISO)

- ISO 9001:2015
- ISO/IEC 27001:2013

PHACIL TECHNICAL EXPERTISE

Our Veritone services include support of a comprehensive, tailored solution:

- Application Development & Management**
 - Integration & Custom Development
 - Workflow Management and Integration
 - Data Product Development, Integration & Management
 - Operations, Maintenance, & Hosting
- AI Engineering**
 - Data Science and AI Engine Modification / Training
 - AI Engine Customization
- Professional Services**
 - Analysts
 - Training

Features	Benefits
aiWARE™ orchestration enables the use of existing agency AI plus the selection of 200+ commercially available engines	Boost AI scalability and optimize results of complex data sources
Single AI platform with self service and shared infrastructure	Process petabytes of unstructured data into useable structured data in a highly accurate, timely and cost-effective manner
Integrated with Relativity® to deliver transcription, redaction, translation, objection detection and more	Extend eDiscovery beyond the boundaries of text-based documents with audio and video capabilities
Supports third party engines, applications and data adapters	Facilitate rapid deployment of new technology without costly changes to infrastructures or workflows
Flexible hosting with cloud, private cloud and on premise models	Deliver both computing power and secured infrastructure to meet unique needs

OUR TECHNOLOGY ENABLING PARTNERSHIPS
